This is a subset of technical specifications for the N5230A network analyzer.

To view or print the N5230A technical specifications, visit our web site at
www.agilent.com/find/pna

This N5230A document provides technical specifications for the following calibration kits and ECal modules only: 85052B, 85056A, 85032B, N4691A, and N4693A. Please download our free Uncertainty Calculator from www.agilent.com/find/na_calculator to generate the curves for your calibration kit and PNA setup.

Definitions

All specifications and characteristics apply over a $25\text{ }^{\circ}\text{C} \pm 5\text{ }^{\circ}\text{C}$ range (unless otherwise stated) and 90 minutes after the instrument has been turned on.

Specification (spec.): Warranted performance. Specifications include guardbands to account for the expected statistical performance distribution, measurement uncertainties, and changes in performance due to environmental conditions.

Characteristic (char.): A performance parameter that the product is expected to meet before it leaves the factory, but that is not verified in the field and is not covered by the product warranty. A characteristic includes the same guardbands as a specification.

Typical (typ.): Expected performance of an average unit which does not include guardbands. It is not covered by the product warranty.

Nominal (nom.): A general, descriptive term that does not imply a level of performance. It is not covered by the product warranty.

Calibration: The process of measuring known standards to characterize a network analyzer's systematic (repeatable) errors.

Corrected (residual): Indicates performance after error correction (calibration). It is determined by the quality of calibration standards and how well "known" they are, plus system repeatability, stability, and noise.

Uncorrected (raw): Indicates instrument performance without error correction. The uncorrected performance affects the stability of a calibration.

Standard: When referring to the analyzer, this includes no options unless noted otherwise.

Corrected System Performance

The specifications in this section apply for measurements made with the N5230A analyzer with the following conditions:

- 10 Hz IF bandwidth
- No averaging applied to data
- Isolation calibration with an averaging factor of 8

13.5 GHz to 20 GHz		108	100	100				
20 GHz to 31.25 GHz			92	92				
31.25 GHz to 40 GHz			87	87				
40 GHz to 50 GHz				75				

1. The system dynamic range is calculated as the difference between the noise floor and the specified source maximum output power. The effective dynamic range must take measurement uncertainties and interfering signals into account.
2. May be degraded by 10 dB at particular frequencies (multiples of 5 MHz) below 500 MHz due to spurious receiver residuals. Methods are available to regain the full dynamic range.

Table 2. Extended dynamic range¹**Configurable test set and extended power range**

Description	Specification (dB) at direct receiver access input				Typical (dB) at direct receiver access input			
	Option 025, 125	Option 225	Option 425	Option 525	Option 025, 125	Option 225	Option 425	Option 525
300 kHz to 1 MHz	118							
1 MHz to 10 MHz	128							
10 MHz to 45 MHz	137				115	109	109	
45 MHz to 70 MHz ²	137	113	111	111				
70 MHz to 500 MHz ²	137	117	111	111				
500 MHz to 2 GHz	137	122	122	122				
2 GHz to 6 GHz	137							
6 GHz to 8 GHz	136	122	122	122				
8 GHz to 9 GHz	136							
9 GHz to 10.5 GHz	132	122	112	112				
10.5 GHz to 12.5 GHz	127	122	112	112				
12.5 GHz to 13.5 GHz	124	120	112	112				
13.5 GHz to 20 GHz		120	112	112				
20 GHz to 31.25 GHz			103	103				
31.25 GHz to 40 GHz				98	98			
40 GHz to 50 GHz					83			

1. The direct receiver access input extended dynamic range is calculated as the difference between the direct receiver access input noise floor and the source maximum output power. The effective dynamic range must take measurement uncertainties and interfering signals into account. This set-up should only be used when the receiver input will never exceed its compression or damage level. When the analyzer is in segment sweep mode, it can have predefined frequency segments which will output a higher power level when the extended dynamic range is required (i.e. devices with high insertion loss), and reduced power when receiver compression or damage may occur (i.e. devices with low insertion loss). The extended range is only available in one-path transmission measurements.
2. May be degraded by 10 dB at particular frequencies (multiples of 5 MHz) below 500 MHz due to spurious receiver residuals. Methods are available to regain the full dynamic range.

N5230A Corrected system performance with 3.5 mm connectors

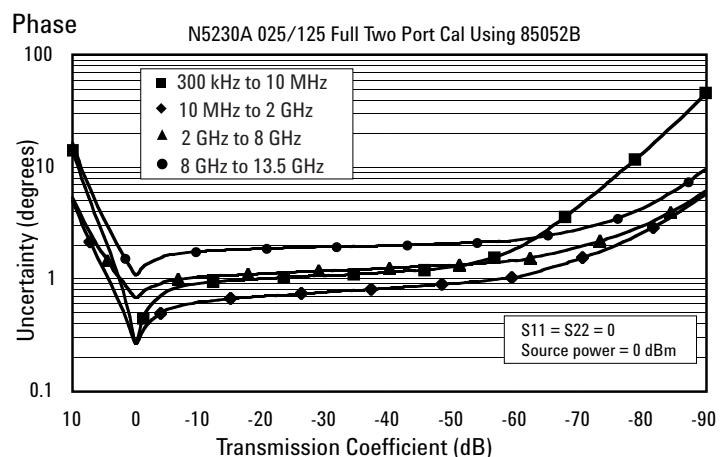

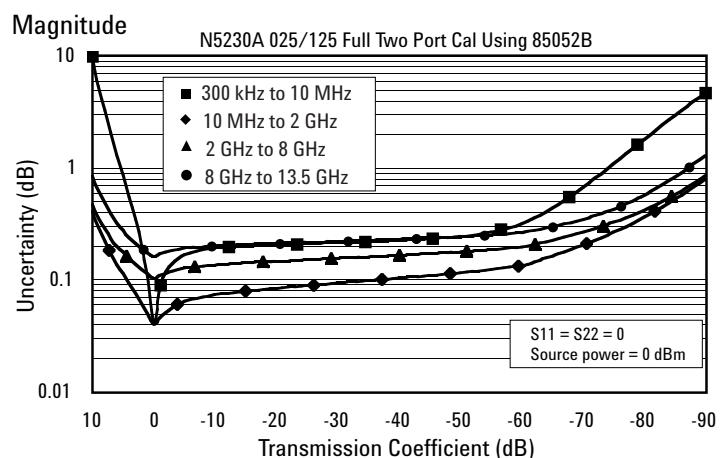

**Table 3. 85052B Calibration kit
N5230A – configurable test set and extended power range (Option 025, 125)**

Configurable test set, extended power range

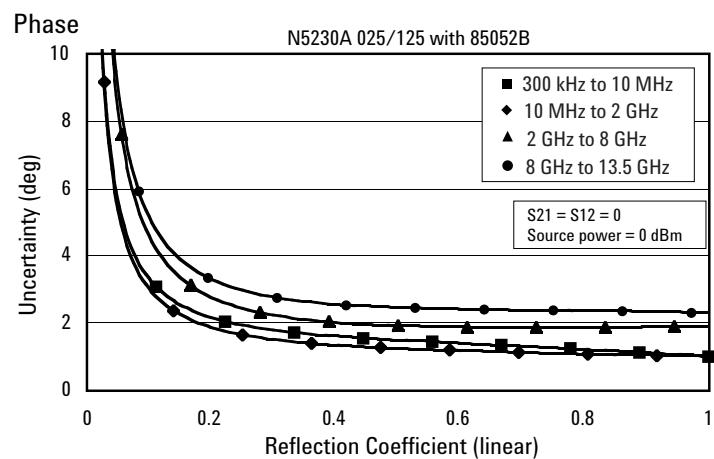

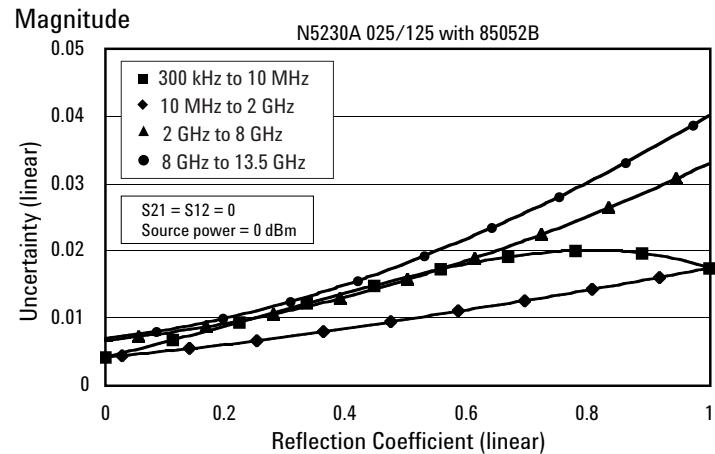

Applies to the N5230A Option 025.125 analyzers, 85052B (3.5 mm) calibration kit, 85131F flexible test port cable set, and a full 2-port calibration. Also applies to the following condition: Environmental temperature $23^\circ \pm 3^\circ \text{C}$, with $< 1^\circ \text{C}$ deviation from calibration temperature.

Description	Specification (dB)

10.5 GHz to 13.5 GHz				80 mdeg								
Description	Specifications			Typicals								
	Option 020, 025, 120, 125, 220, 225, 420, 425, 520, 525			Option 020, 025, 120, 125, 220, 225, 420, 425, 520, 525								
Reference level magnitude												
Range	±200 dB											
Resolution	0.001 dB											
Reference level phase												
Range	±500°											
Resolution	0.01°											

1. Total average (rms) noise power calculated as the mean value of a linear magnitude trace expressed in dBm.

2. Coupler roll-off will reduce compression to a negligible level below 45 MHz.

3. 1 kHz IF BW, ratioed measurement, nominal power at the test port.

4. Stability is defined as a ratio measurement made at the test port.

Table 12. Test port input (group delay)¹

Description	Specification	Supplemental information (typ.)
Aperture (selectable)		(frequency span)/(number of points -1)
Maximum aperture		20% of frequency span
Range		0.5 x (1/minimum aperture)
Maximum delay		Limited to measuring no more than 180° of phase change within the minimum aperture
Accuracy		See graph below. Char.

The following graph shows characteristic group delay accuracy with full 2-port calibration and a 10 Hz IF bandwidth. Insertion loss is assumed to be < 2 dB and electrical length to be ten meters.

Group delay (typical)

In general, the following formula can be used to determine the accuracy, in seconds, of specific group delay measurement:

$$\pm \text{Phase Accuracy (deg)} / [360^\circ \text{ Aperture (Hz)}]$$

Depending on the aperture and device length, the phase accuracy used is either incremental phase accuracy or worst case phase accuracy.

-
1. Group delay is computed by measuring the phase change within a specified frequency step (determined by the frequency span and the number of points per sweep).

1. Any PNA Service Guide contains instructions for running the analyzer's built-in Display Test". You can view a PDF file of a Service Guide on the Web at www.agilent.com/find/pna. After opening the PDF file, look in the left-side column and then click on the "Index" bookmark. From the index, click on "Display Test".

Table 15. Rear panel information

Description	Supplemental information
10 MHz Reference in	
Connector	BNC, female
Input frequency	10 MHz \pm 10 ppm, typical
Input level	-15 dBm to +20 dBm, typical
Input impedance	200 W, nom.
10 MHz Reference out	
Connector	BNC, female
Output frequency	10 MHz \pm 1 ppm, typical
Signal type	Sine Wave, typical
Output level	+10 dBm \pm 4 dB into 50 W, typical
Output impedance	50 W, nominal
Harmonics	< -40 dBc, typical
VGA Video output	
Connector	15-pin mini D-Sub; Drives VGA compatible monitors
Devices supported:	Resolutions:
Flat panel (TFT)	1024 X 768, 800 X 600, 640 X 480
Flat panel (DSTN)	800 X 600, 640 X 480
CRT monitor	1280 X 1024, 1024 X 768, 800 X 600, 640 X 480 Simultaneous operation of the internal and external displays is allowed, but with 640 X 480 resolution only. If you change resolution, you can only view the external display (internal display will "white out").
Test set IO	
	25-pin D-Sub connector, available for external test set control
Aux IO	
	25-pin D-Sub connector, male, analog and digital IO
Handler IO	
	36-pin parallel I/O port; all input/output signals are default set to negative logic; can be reset to positive logic via GPIB command
GPIB	
	24-pin D-sub (Type D-24), female; compatible with IEEE-488.
Parallel port (LPT1)	
	25-pin D-Sub miniature connector, female; provides connection to printers or any other parallel port peripherals
Serial Port (COM 1)	
	9-pin D-Sub, male; compatible with RS-232
USB Port	
	One port on front panel and five ports on rear panel. Universal Serial Bus jack, Type A configuration (4 contacts inline, contact 1 on left); female
Contact 1	Vcc: 4.75 to 5.25 VDC, 500 mA, maximum
Contact 2	-Data
Contact 3	+Data
Contact 4	Ground
LAN	
	10/100BaseT Ethernet, 8-pin configuration; auto selects between the two data rates

Table 15. Rear panel information (continued)

Description	Supplemental information
Line power¹ (single phase)	
Frequency	50/60 Hz/400 Hz
Voltage	120 to 240 VAC (power supply is auto switching)
Maximum	500 Watts

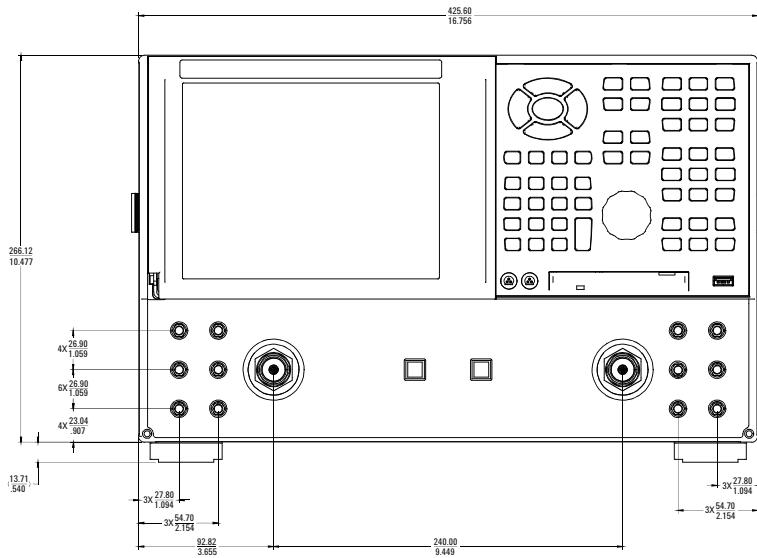

1. A third-wire ground is required.

Note: Option H08 and Option H11 specifications are not provided in this N5230A specifications document.

Table 16. Analyzer environment and dimensions

Description	Supplemental information
General environmental	
EMC	Complies with European EMC directive 89/336/EEC, amended by 93/68/EEC <ul style="list-style-type: none"> • IEC/EN 61326 • CISPR Pub 11 Group 1, class A • AS/NZS 2064 • ICES/NMB-001
Safety	Complies with European Low Voltage Directive 73/23/EEC, amended by 93/68/EEC <ul style="list-style-type: none"> • IEC/EN 61010 • Canada: CSA C22.2 No. 61010 • USA: UL 61010B
ESD	Minimize using static-safe work procedures and an antistatic bench mat
Dust	Minimize for optimum reliability
Operating environment	
Temperature	0 °C to +40 °C Instrument powers up and displays no error messages within this temperature range (except for "source unleveled" error message that may occur at temperatures outside the specified performance temperature range of 25 ± 5 °C).
Error-corrected temperature range	23 °C ± 3 °C with less than 1 °C deviation from calibration temp.
Altitude	0 to 4500 m (14,760 ft.)
Non-operating storage environment

at maximum specified output power**

Description	Specification		
	Option 025, 125	Typicals	Options 425, 525
Maximum output level			
300 kHz to 10 MHz	-15 dBm		
10 MHz to 500 MHz	-13 dBm	-18 dBm	-28 dBm
500 MHz to 2 GHz	-14 dBm	-18 dBm	-28 dBm
2 GHz to 6 GHz	-14 dBm	-19 dBm	-28 dBm
6 GHz to 8 GHz	-16 dBm	-19 dBm	-28 dBm
8 GHz to 9 GHz	-16 dBm	-20 dBm	-27 dBm
9 GHz to 10.5 GHz	-20 dBm	-20 dBm	-27 dBm
10.5 GHz to 12.5 GHz	-22 dBm	-20 dBm	-27 dBm
12.5 GHz to 13.5 GHz	-24 dBm	-23 dBm	-26 dBm
13.5 GHz to 20 GHz		-23 dBm	-26 dBm
20 GHz to 31.25 GHz			-32 dBm
31.25 GHz to 40 GHz			-26 dBm
40 GHz to 45 GHz			-29 dBm
45 GHz to 50 GHz			-28 dBm
Damage level			
N5230A	+20 dBm	+20 dBm	+20 dBm
Maximum DC level			
N5230A	±16 V	±7 V	±7 V

Table 26: Source outputs (port 1 source out, port 2 source out)
at maximum specified output power

Description	Specification		
	Option 025, 125	Typicals	Options 425, 525
Maximum output level			
300 kHz to 10 MHz	+11 dBm		
10 MHz to 500 MHz	+11 dBm	+6 dBm	+1 dBm
500 MHz to 6 GHz	+11 dBm	+7 dBm	+1 dBm
6 GHz to 9 GHz	+10 dBm	+7 dBm	+1 dBm
9 GHz to 12.5 GHz	+8 dBm	+7 dBm	+1 dBm
12.5 GHz to 13.5 GHz	+5 dBm	+5 dBm	+3 dBm
13.5 GHz to 20 GHz		+5 dBm	+3 dBm
20 GHz to 31.25 GHz			-5 dBm
31.25 GHz to 40 GHz			-4 dBm
40 GHz to 45 GHz			-11 dBm
45 GHz to 50 GHz			-11 dBm
Damage level			
N5230A	+27 dBm	+30 dBm	+30 dBm
Maximum DC level			
N5230A	±16 V	±7 V	±7 V

Table 27: Coupler inputs (port 1 Cpllr Thru, port 2 Cpllr Thru)

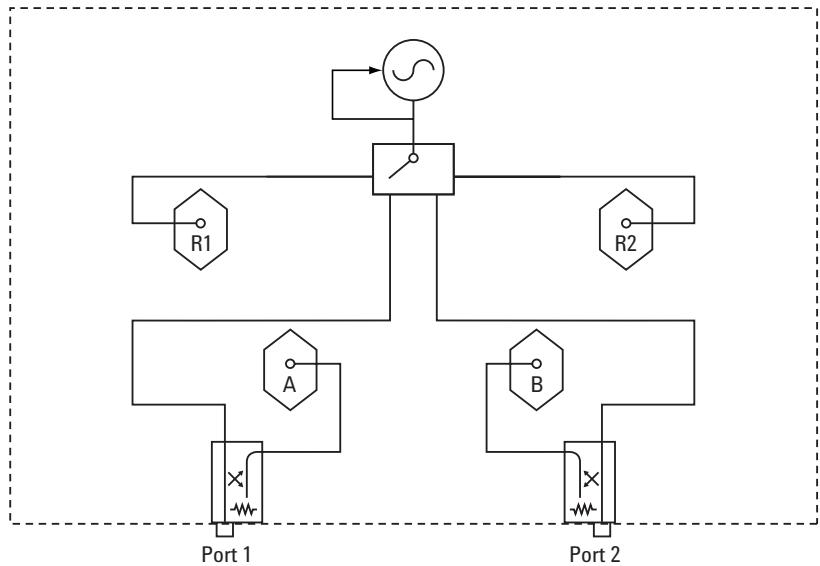

Description	Specification		
	Option 025, 125	Typicals	Options 425, 525
Insertion loss to test port			
30 kHz to 10 MHz	2 dB		
10 MHz to 500 MHz	2 dB	0.6 dB	0.6 dB
500 MHz to 2 GHz	3 dB	1.6 dB	0.8 dB
2 GHz to 8 GHz	3 dB	1.8 dB	1.0 dB
8 GHz to 9 GHz	3 dB	1.9 dB	1.0 dB
9 GHz to 12.5 GHz	4 dB	1.9 dB	1.0 dB
12.5 GHz to 13.5 GHz	4 dB	2.0 dB	2.0 dB
13.5 GHz to 20 GHz		2.0 dB	2.0 dB
20 GHz to 31.25 GHz			3.0 dB
31.25 GHz to 50 GHz			4.0 dB
Damage level			
N5230A	+27 dBm	+30 dBm	+30 dBm
Maximum DC level			
N5230A	±16 V	±40 V	±40 V

Table 28: Coupler outputs (port 1 Cpllr Arm, port 2 Cpllr Arm)

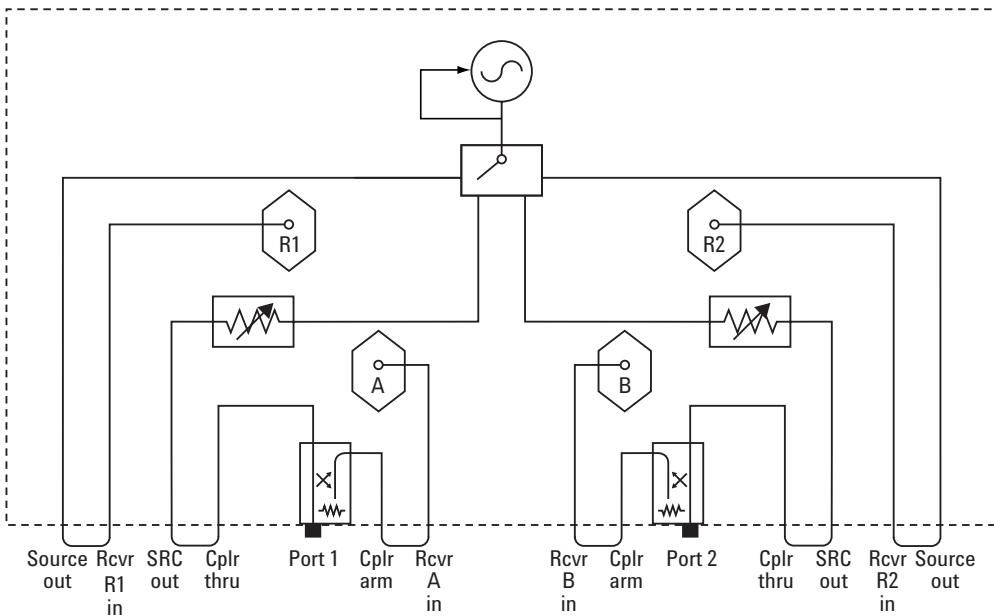

Description	Specification		
	Option 025, 125	Typicals	Options 425, 525
Damage level			
N5250A	+15 dBm	+30 dBm	+30 dBm
Maximum DC level			
N5250A	+0 dBm	+30 dBm	+30 dBm

Test Set Block Diagrams

**N5230A Option 020, 120, 220, 420, or 520
(standard test set and standard power range) network analyzer**

**N5230A Option 025, 125, 225, 425, or 525
(configurable test set and extended power range) network analyzer**

Agilent Technologies' Test and Measurement Support, Services, and Assistance

Agilent Technologies aims to maximize the value you receive, while minimizing your risk and problems. We strive to ensure that you get the test and measurement capabilities you paid for and obtain the support you need. Our extensive support resources and services can help you choose the right Agilent products for your applications and apply them successfully. Every instrument and system we sell has a global warranty. Two concepts underlie Agilent's overall support policy: "Our Promise" and "Your Advantage."

Our Promise

Our Promise means your Agilent test and measurement equipment will meet its advertised performance and functionality. When you are choosing new equipment, we will help you with product information, including realistic performance specifications and practical recommendations from experienced test engineers. When you receive your new Agilent equipment, we can help verify that it works properly and help with initial product operation.

Your Advantage

Your Advantage means that Agilent offers a wide range of additional expert test and measurement services, which you can purchase according to your unique technical and business needs. Solve problems efficiently and gain a competitive edge by contracting with us for calibration, extra-cost upgrades, out-of-warranty repairs, and onsite education and training, as well as design, system integration, project management, and other professional engineering services. Experienced Agilent engineers and technicians worldwide can help you maximize your productivity, optimize the return on investment of your Agilent instruments and systems, and obtain dependable measurement accuracy for the life of those products.

Agilent Email Updates

www.agilent.com/find/emailupdates
Get the latest information on the products and applications you select.

Agilent Direct

www.agilent.com/find/agilentdirect
Quickly choose and use your test equipment solutions with confidence.

Agilent Open

www.agilent.com/find/open
Agilent Open simplifies the process of connecting and programming test systems to help engineers design, validate and manufacture electronic products. Agilent offers open connectivity for a broad range of system-ready instruments, open industry software, PC-standard I/O and global support, which are combined to more easily integrate test system development.

For more information on Agilent Technologies' products, applications or services, please contact your local Agilent office.
