

All-New **HypotULTRA** THE MOST FLEXIBLE AND FEATURE-RICH **AUTOMATED DIELECTRIC ANALYZER AVAILABLE**

The best dielectric analyzer available just got better. We've combined superior testing power and ease of use, with an innovative sleek design that showcases all of our productivity and safety enhancing features. Our touch screen capability allows you to interact with your instrument as intuitively as you would with a smart phone. This simplifies setting up your system and test parameters. You can also easily drag, drop and swap test screen meters to prioritize the ones you want to see. Get even more out of your instrument with direct barcode connection, the all-new feature increases efficiency and production throughput. The addition of on-board data storage takes the pain out of your data transfer with on-board flash drive support and local data storage. HypotULTRA will improve the productivity and safety of your production line in every single way.

Why We Use Counts

Associated Research publishes some specifications using "counts" which allows us to provide a better indication of the tester's capabilities across measurement ranges. A "count" refers to the lowest resolution of the display for a given measurement range. For example, if the resolution for voltage is 1 V then 2 counts=2 V.
